(India)

Completed Diploma Engineering with CGPA 8.84.

ACADEMIC PROJECTS

2018

OPEN SOURCE CUSTOMER MANAGEMENT SYSTEM (CRM)

It is very important to have good relation between service provider and customer. We had analyzed CRM software available online charge for some basic functionality like live dashboard, limited contact space and many more. We have implemented the open source platform where one can easily register as manager for free and add their employees and clients after that one can upload ongoing project and can have live feeds by dynamic and real time diagram (pie chart). Even manager can view the project status and sells and can also find details of customers and employee under which client is registered. There is also a client module where client can login and make queries for multiple product and service.

2017

OLD BOOKS AND EQUIPMENT TRADING WEBSITE (OBET E-COMMERCE)

Our main domain was university campus where we observed that the book and equipment purchased by students for the semester were useless after the finals so, we had developed the website in which one can register for free and upload the book or equipment with photograph and detail into system and on the another hand students how are in need for used books can find the books in system with search bar or can explore things with category and after finding perfect match one can get the sellers contact details and can also can leave feedback on the product.

2015

LEAVE MANAGEMENT SYSTEM (LMS)

LMS was my diploma project in which our team had tried to develop the online leave management system using php,HTML,javascript and mysql. In the system admin can add the employers and they can add or delete their employees. The employer can set the basic leave rule according to their company policy and employees can apply for the leave and can see the status for the applied leave. Moreover at the end of the month employer can also generate the pay-slip for employee according to their taken leave.

OTHER MINOR PROJECTS

- Payroll management system in java (5th semester).
- Inventory Management System, desktop application for jewellery shop in C# (6th semester).
- Share Record, desktop application to keep history of share buying & selling in C# (6th semester).

STRENGTHS
