# **1 Introduction**

This application will help all sorts of businesses to handle, control and store their goods while having a simple track on every moment with all necessary details. This application will have two modules which are driver's and admin's where both need to sign up on the application (specifying role on signup) and admin will be able to post trips where the drivers will be able to connect to trips (admin is the one who wants to move their goods). The User and Admin can also leave feedback/ratings of others and this feedback can be viewed publicly on their profile.

## **1.1 Purpose**

For good customer service, businesses must have effective and helpful logistics management application/software so they can provide good customer experience by which they can grow more business. However, this application will also help the admin to get success in the supply chains life cycle of business by which user can compete in this era of globalization and our application will help this business to get deliver this good by just posting a trip with all details in application and on the other hand, the driver will be able to see this posted trip with details. Moreover, drives will also get an opportunity for self-employment.

## **1.2 Scope**

There are a lot of tasks to handle when it comes to logistics like orders processing, transportation and inventory. So, this application will help admin to transport goods between locations and it will also help the admin to manage or view available stock in warehouse (inventory) while admin just need to post the delivery requirements which will be further viewed by drivers for moving the goods. Moreover, there are many logistic apps already available on app store and play store. Among them, most of the applications require dozens of steps to even get registered into the system. where this app will be a smooth process for drives and businesses to grow.

## **2 General Description**

This section specifies the workflow of application and the overview of application functions.

### **2.1 Product Functions**

- Login For admin/driver (one must select the role)
- Sign Up for new admin/drives (one must select the roles)
- admin can post a trip with shipment details (destination pickup time, delivery time, weight,size,distance,status etc)
- admin can update the posted trip details (before the pickup is done)
- admin can see the posted trip status.
- the driver will be able to see posted available trips with a conform and decline button (with trip details).
- The driver can update the trip's status (only after confirming the trip.)
- Once the status is updated, the delivered trip will mark as completed.
- the driver/admin can rate the trip (only after marked completed by driver).
- the drive will/can be navigated to posted available trips (if he doesn't clicked and conform trip button)
- the driver can edit his profile details

### **2.2 Users Characteristics**

Both admin and driver have to specify the role at signup, after login the admin can post a trip, update and see the status of trips where the driver will be able to conform and update the trip and can rate the trip after completing it. .

### 3 Specific Requirements

#### 3.1 Functional Requirements

Functional Requirements are essential for building the Logistics Company App.

| Functional Requirements |                               |   |
|-------------------------|-------------------------------|---|
| Sr. No                  | Name                          | Description   |
| FR-1                    | Sign up/Login                 | Users and admin must sign up on the application with all required credentials.  |
| FR-2                    | Add trip                      | the admin must be able to post the trip with all information on the application, like new loads available to pickup, its pickup time, delivery time, pickup and delivery locations, distance and cost per hour. |
| FR-3                    | Edit trip                     | Admin must be able to update the trip details before pickup only.   |
| FR-4                    | view trip status              | Admin must get the notification when any driver confirms the trip with all details of drivers (drivers will be able to see all the trip details).   |
| FR-5                    | delete trip                   | Admin must be able to delete or cancel the trip before its pickup.  |
| FR-7                    | post/view feedback            | Drivers must be able see the ratings/reviews of the admin.(or vice versa)   |
| FR-8                    | update trip progress (status) | Driver must be able to update trip status whenever pickup and drop off is done.( so, admin can track their shipment.)   |
| FR-9                    | trip summary                  | Drivers can access their completed trip history and their corresponding payslips.   |

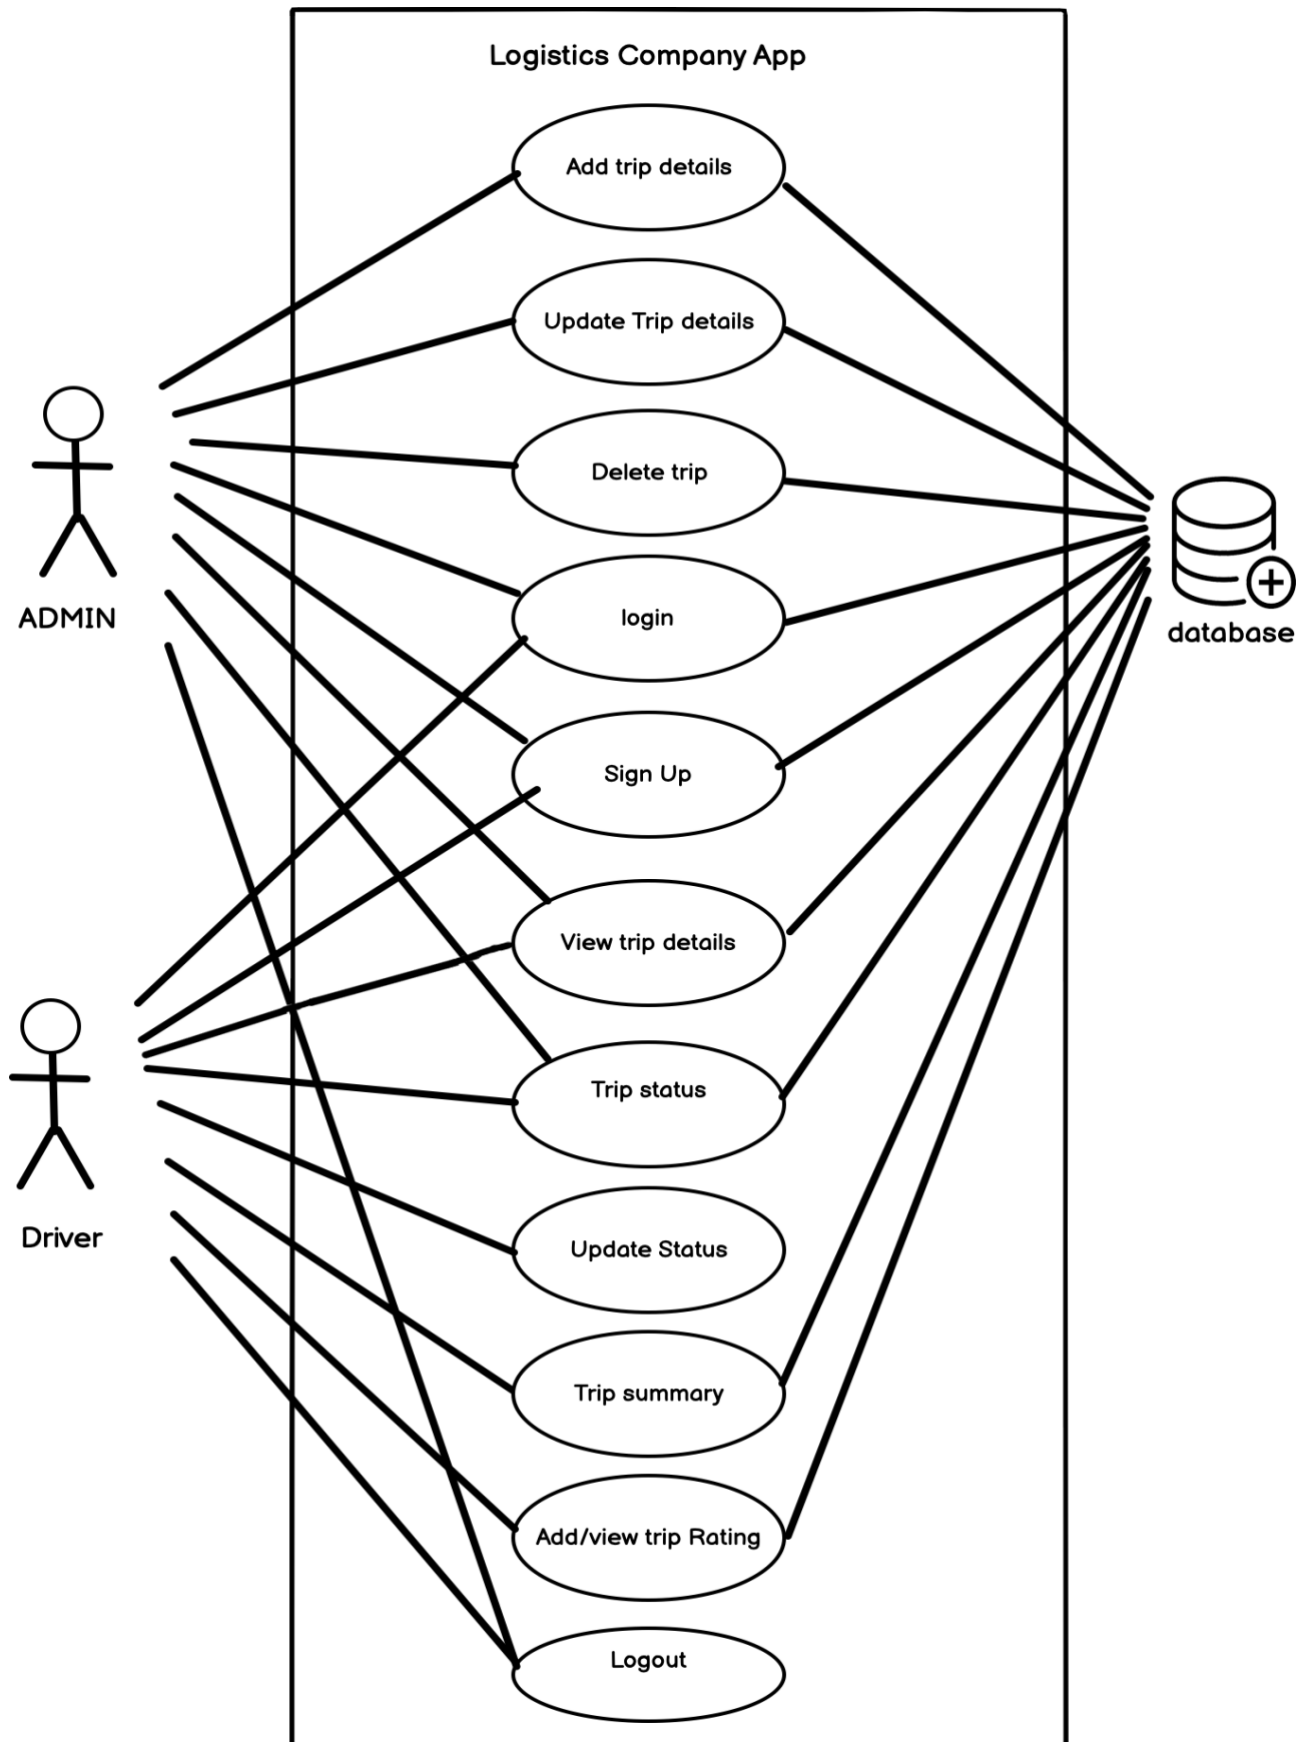

|       |              |  |
|-------|--------------|--|
| FR-10 | notification | At the time of trip confirmation, admin and driver both will get notification. |
| FR-12 | Logout       | Users must be able to logout from the application.                             |

### 3.2 Non-Functional Requirements

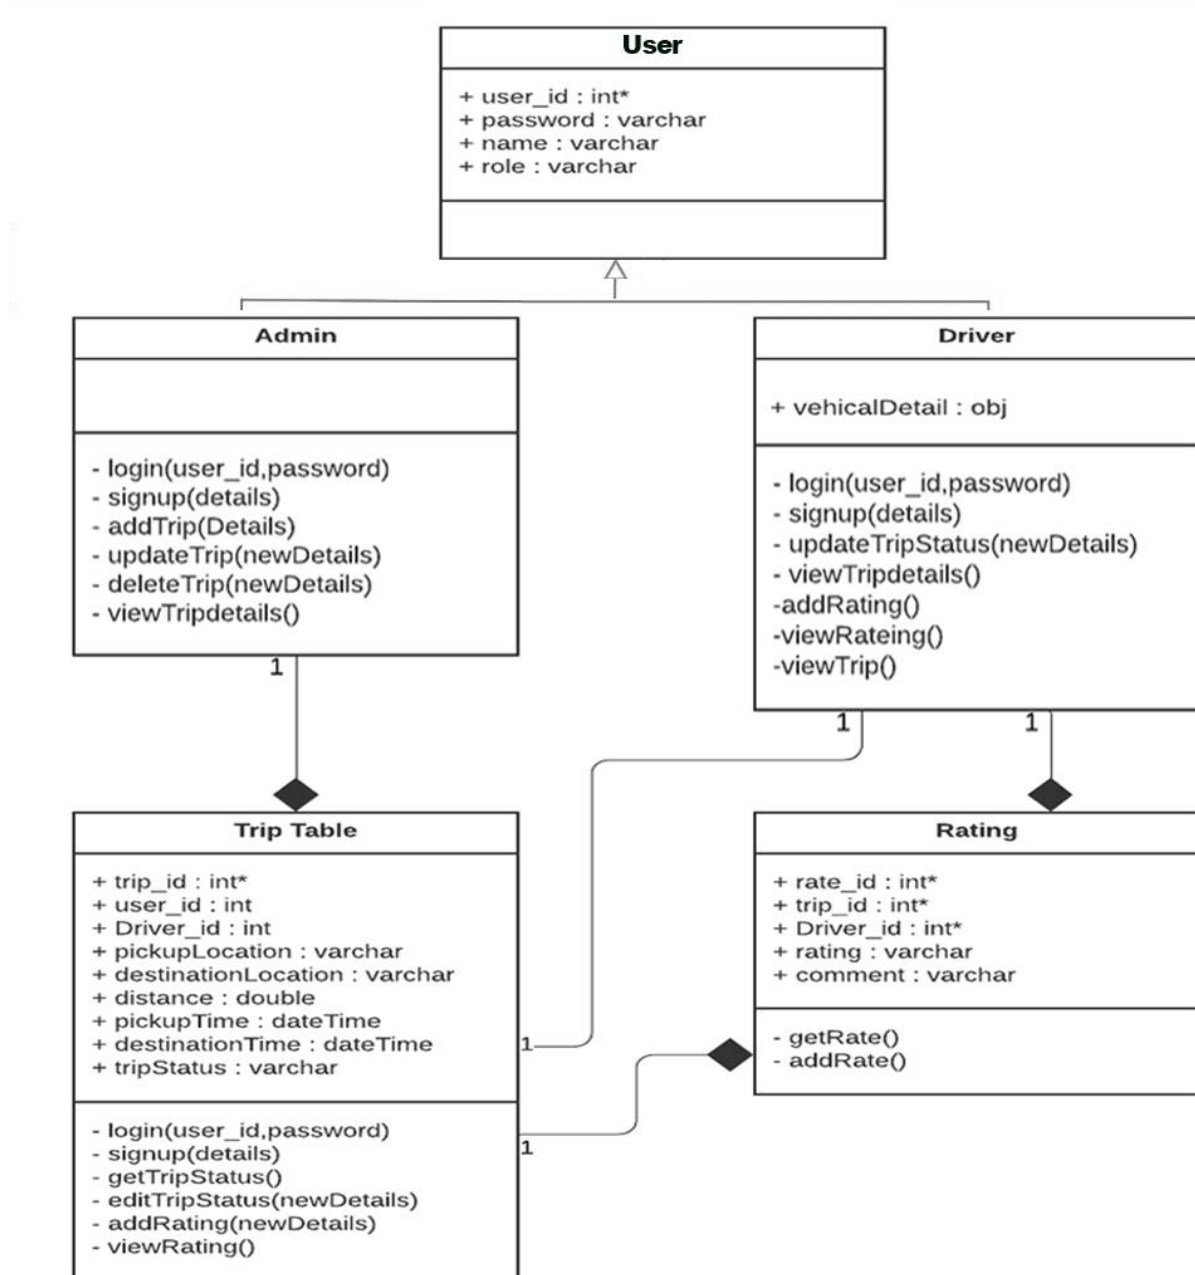

| Non-Functional Requirements |               |   |
|-----------------------------|---------------|---|
| Sr. No                      | Name          | Description   |
| NFR-1                       | Performance   | the navigation between activities must be quick.  |
| NFR-2                       | Response Time | the updated status must be quickly reflected in trip status.  |
| NFR-3                       | Reliability   | Driver's all-important details (like Vehicle plate numbers and driving licenses) must be validated prior. |
| NFR-5                       | Usability     | Admin should have the right to see all confidential information with prior permission of the driver.      |
| NFR-6                       | Memory        | The application size along with resources should not exceed more than 30MB                                |
| NFR-7                       | Availability  | application will be compatible with almost android version  |

### 4.3.1 Admin sequence diagram

### 4.3.2 Driver sequence diagram

### 4.3 E-R Diagram

## 4.4 User Stories

This section contains the user stories. The functional breakdown is viewed as user stories.

|               |  |
|---------------|--|
| User story Id | 01   |
| Name          | As a user, I want to enter my email and password so that I can login to the logistics company app.                             |
| Description   | When a user wants to access the logistics company app, the user first needs to enter email and password if already registered. |

|               |   |
|---------------|---|
| User story Id | 02  |
| Name          | As a user, I want to register first to the logistics company app so that I can login.   |
| Description   | When users want to access the logistics company app. Users need to register with email, name, password, and confirm password. |

|               |   |
|---------------|---|
| User story Id | 03  |
| Name          | As a user, I want to access the home page after login         |
| Description   | When a logged-in user should be able to view his trip details |

|               |  |
|---------------|--|
| User story Id | 04   |
| Name          | As an admin I must be able to post the trip with all information on the application, like new loads available to pick up, its pickup time, delivery time, pickup and delivery locations, distance and cost per hour. |
| Description   | The admin should be able to add new loads available to pick up, its pickup time, delivery time, pickup and   |

|  |   |
|--|---|
|  | delivery locations, distance and cost per hour. |
|--|---|

|               |   |
|---------------|---|
| User story Id | 05  |
| Name          | As an Admin I must be able to update the trip details   |
| Description   | The admin after login can able to update the details of the trip like pick up, its pickup time, delivery time, pickup and delivery locations, distance and cost per hour. |

|               |   |
|---------------|---|
| User story Id | 06  |
| Name          | AS an admin i should be able to view the trip status  |
| Description   | Admin must get the notification when any driver confirms the trip with all details of drivers (drivers will be able to see all the trip details). |

|               |  |
|---------------|--|
| User story Id | 07   |
| Name          | As an admin, i must be able to delete the trip                     |
| Description   | Admin must be able to delete or cancel the trip before its pickup. |

|               |   |
|---------------|---|
| User story Id | 08  |
| Name          | As an Admin I should be able to delete or cancel the trip before its pickup.  |
| Description   | This list will include the name of the cinemas, location and their popularity |

|               |   |
|---------------|---|
| User story Id | 09  |
| Name          | As a Driver, i must be able to view the feedback on trips                     |
| Description   | Drivers must be able see the ratings/reviews of the admin.<br>(or vice versa) |

|               |   |
|---------------|---|
| User story Id | 10  |
| Name          | As a Driver, I want to update trip progress (status)  |
| Description   | Driver must be able to update trip status whenever pickup and drop off is done. (so, admin can track their shipment.) |

|               |  |
|---------------|--|
| User story Id | 11   |
| Name          | As a Driver i must be able to view the trip summary                                |
| Description   | Drivers can access their completed trip history and their corresponding pay slips. |

|               |  |
|---------------|--|
| User story Id | 12   |
| Name          | As a Driver, I must be too able to view the notifications                      |
| Description   | At the time of trip confirmation, admin and driver both will get notification. |

|               |  |
|---------------|--|
| User story Id | 13   |
| Name          | As a Driver i must be able to logout of this application |
| Description   | Users must be able to logout from the application.       |

|               |   |
|---------------|---|
| User Story Id | 101(Non-functional)   |
| Name          | As a user I want to be have a good user experience while using partner movie application because I want to use it again and again |

|             |   |
|-------------|---|
| Description | The purpose of this story is to improve the user's experience by improving code quality and therefore improving the usability of the application. |
|-------------|---|

|               |   |
|---------------|---|
| User story Id | 102   |
| Name          | As a Stakeholder I want a lower code complexity in order to have better maintainability.                |
| Description   | In the application, there should be a code complexity of around 550 to reduce the risk of complex code. |

|               |   |
|---------------|---|
| User story Id | 103   |
| Name          | As a Stakeholder I want responsive touch input because I want a better user experience  |
| Description   | The application should always remain responsive, meaning the user is always able to input any data that they need, and they are never waiting on the application. |

|               |  |
|---------------|--|
| User story Id | 104  |
| Name          | As a user I want low battery usage because my battery does not last long   |
| Description   | The application should never drain too much battery. This can be seen if you leave the application running in the background for an extended period of time. The battery should not drain quickly. |

|               |   |
|---------------|---|
| User story Id | 105   |
| Name          | As a user, I want my application to be memory efficient because my device has limited memory.   |
| Description   | The application should never use too much memory when the user is using it. This can be seen by installing the application, seeing how much space it takes. |

|               |  |
|---------------|--|
| User story Id | 106  |
| Name          | As a user I want limited network data usage because I have a limited data plan   |
| Description   | The application should never use too much data as this could potentially cost the user money if they are not on Wi Fi. |

## 5 Use Case Scenarios

### 5.1 Splash Screen

|                  |   |  |
|------------------|---|--|
| Use Case ID      | UC1   |  |
| Use Case Name    | Splash Screen   |  |
| Actor            | Admin/Driver  |  |
| Description      | This use case describes the splash screen of the application  |  |
| Triggering event | Admin/user need to open/run the application                   |  |
| Preconditions    | Users must have a good internet connection.                   |  |
| Flow of events   | Actor   | Flow of events   |
|                  | Driver/Admin  | 1.1 System checks the internet connection.<br>1.2 System will display the splash screen for a few seconds. |
| Post conditions  | The Actor/Driver sees the login page after the splash screen. |  |
| Exception        |   |  |

### 5.2 REGISTERED MAIL

|                  |   |                |
|------------------|---|----------------|
| Use Case ID      | UC2   |                |
| Use Case Name    | Registration page   |                |
| Actor            | User  |                |
| Description      | This use case describes how the Admin/User enters all the information for the first-time registration to the app. |                |
| Triggering event | User selects the <b>register</b> link   |                |
| Preconditions    | Users must be a new user before registration.   |                |
| Flow of events   | Actor   | Flow of events |

|                      |  |  |
|----------------------|--|--|
|                      | 1. User enters the first name<br><br>2. A User enters the last name<br><br>3. User enters the phone number<br><br>4. User enters the email ID.<br><br>5. User enters the Username<br><br>6. User enters the password.<br><br><b>7. Clicks Submit</b> | 1.1. System check if all the information enters by the User will meet the requirements<br><br>2.1. System will send all the information to the database<br><br>3.1. system saves all the information in the database |
| Post conditions      | The Actor sees the menu page after successful login.   |  |
| Exception Conditions | -  | Database connection Issues   |

### 5.3 Driver/Admin Login

|                  |  |  |
|------------------|--|--|
| Use Case ID      | UC3  |  |
| Use Case Name    | Driver/Admin Login   |  |
| Actor            | Driver/Admin   |  |
| Description      | This use case describes how the Driver/Admin logs in to the app with his mail id and password.                       |  |
| Triggering event | Driver/Admin selects the <b>Login</b> link   |  |
| Preconditions    | The Driver/Admin must have registered mail id before login to the app.   |  |
| Flow of events   | Actor  | System   |
|                  | 1. Driver/Admin enters his registered mail id or username.<br>2. Driver/Admin enters his password.<br>3. Click Login | 1 All the information (mail id and password) sends to the database.<br><br>2 Database authenticates the information and acknowledges the system as a valid user.<br><br>3 System displays the menu page to the user. |
| Post conditions  | The Actor sees the menu page after successful login.   |  |
| Exception        | Incorrect Credentials/Database connection Issues   |  |

## 5.4 Driver/Admin Reset password

|                  |   |  |
|------------------|---|--|
| Use Case ID      | UC4   |  |
| Use Case Name    | Driver/Admin Reset password   |  |
| Actor            | Driver/Admin  |  |
| Description      | This use case describes how the Driver/Admin reset his password using his mail id |  |
| Triggering event | Driver/Admin selects the <b>Forgot Password</b> link                              |  |
| Preconditions    | The Driver/Admin must have registered mail id before login to the app.            |  |
| Flow of events   | Actor   | System   |
|                  | 1. Driver/Admin enters his registered mail id or username.<br><br>2. Click submit | 1 All the information (mail id and password) sends to the database.<br><br>2 Database authenticates the information and acknowledges the system as a valid user.<br><br>3 if the user exists them system sends him a mail regarding password resetting |
| Post conditions  | The Actor sees the menu page after successful login.                              |  |
| Exception        | Database connection Issues  |  |

## 5.5 Driver/Admin Navigation

|                  |   |                |
|------------------|---|----------------|
| Use Case ID      | UC5   |                |
| Use Case Name    | Driver/Admin Navigation                                 |                |
| Actor            | Driver/Admin  |                |
| Description      | Driver/Admin should have a navigation bar               |                |
| Triggering event | Driver/Admin clicks on the navigation bar in the screen |                |
| Preconditions    | Driver/Admin must be signed in                          |                |
| Flow of events   | Actor   | Flow of events |

|                 |   |   |
|-----------------|---|---|
|                 | 1.Driver/Admin click the navigation bar.                                  | 1.1. Display the list of the navigation on clicking the nav bar<br><br>2.1. Based on the selection from the navigation list, the next activity will be displayed. |
| Post conditions | Driver/Admin will logout from application after checking his/her profile. |   |
| Exception       | Database connection issues  |   |

## 5.6 Admin trip post

|                      |  |  |
|----------------------|--|--|
| Use Case ID          | UC6  |  |
| Use Case Name        | Admin trip post  |  |
| Actor                | Admin  |  |
| Description          | Admin must be able to post the trip information.               |  |
| Triggering event     | Admin clicks on the Add posts button                           |  |
| Preconditions        | Admin must be logged in  |  |
| Flow of events       | Actor  | Flow of events   |
|                      | Add posts  | 1.1. Admin clicks the Add posts button.<br>21.Admin add the post information<br>3.1 Admin successfully Posted trip information |
| Post conditions      | Users will logout from the application after adding the posts. |  |
| Exception Conditions | -  | Admin must provide accurate information.   |

## 5.7 Update trip details

|               |  |
|---------------|--|
| Use Case ID   | UC7  |
| Use Case Name | Update trip details                            |
| Actor         | Admin  |
| Description   | Admin must be able to update the trip details. |

|                      |  |   |
|----------------------|--|---|
| Triggering event     | Admin clicks on the Update trip button   |   |
| Preconditions        | Admin must enter the new information before updating   |   |
| Flow of events       | Actor  | Flow of events  |
|                      | 1. Admin clicks on the update button<br>2.Admin adds the updated information<br>3. Admin clicks on the submit button | 1.1. Display the posts information<br><br>2.1. Update the database with the changes if any and save the information in the database |
| Post conditions      | Users will logout from the application after checking his/her profile.   |   |
| Exception Conditions | -  | While updating the posts, the details should be correct.  |

## 5.8 View trip status

|                      |  |   |
|----------------------|--|---|
| Use Case ID          | UC8  |   |
| Use Case Name        | View trip status   |   |
| Actor                | Admin  |   |
| Description          | Admin can able to view the trip status                                 |   |
| Triggering event     | Admin clicks trip status button  |   |
| Preconditions        | Admin must be logged in  |   |
| Flow of events       | Actor  | Flow of events  |
|                      | 1.Admin clicks on the trip status<br>2.Admin will view the trip status | 1.1. System store the information of the trip in the database |
| Post conditions      | Admin will logout from application after checking his/her profile.     |   |
| Exception Conditions | -  | While login the details should be correct.                    |

## 5.9 Delete trip

|                      |  |   |
|----------------------|--|---|
| Use Case ID          | UC9  |   |
